Where Canada’s industrial emissions come from

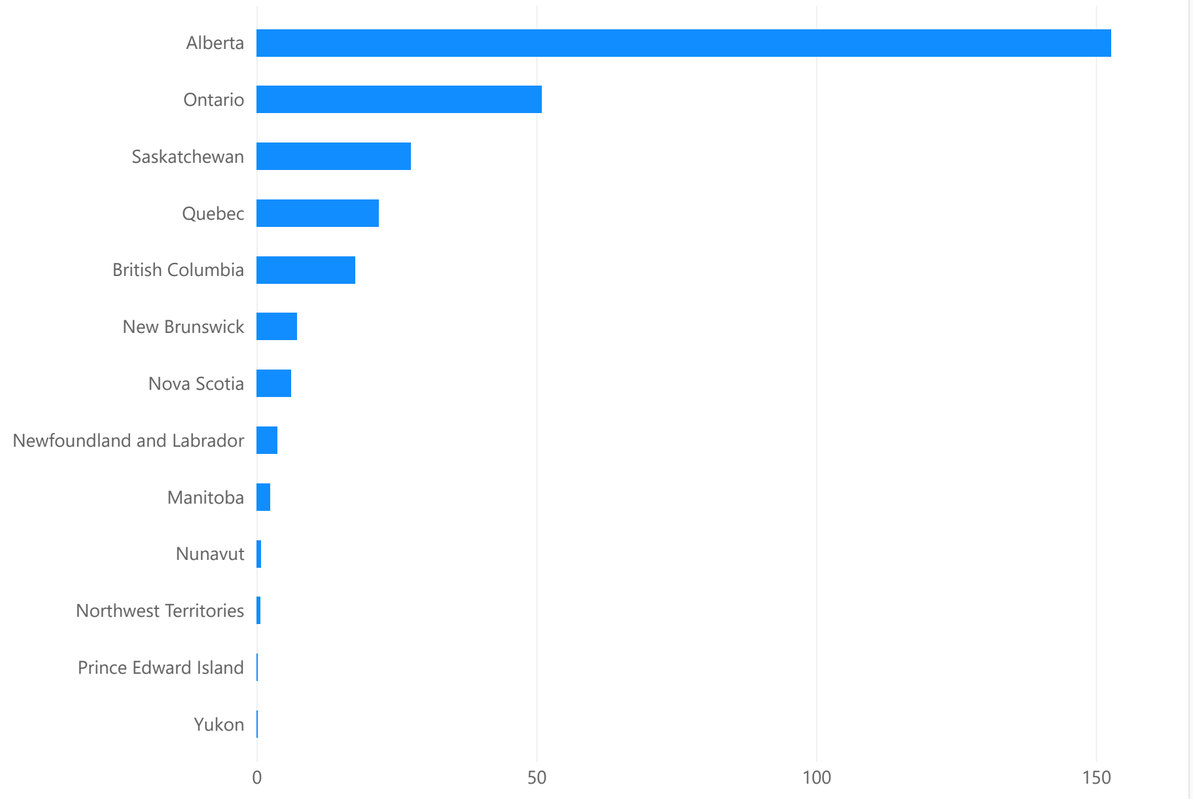

Total emissions, 2024 (Mt CO2e)

291.7

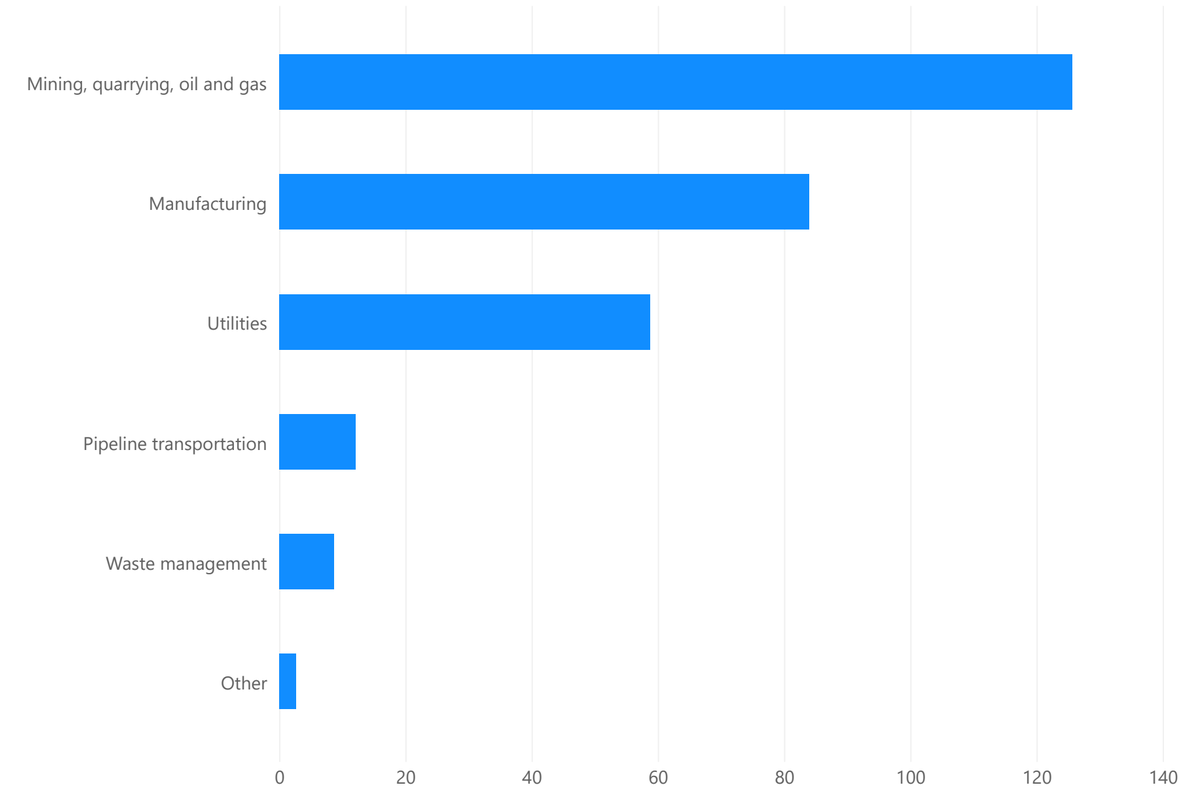

Alberta’s share of Canada’s emissions

52.4%

Emissions by province, 2024 (Mt CO2e)

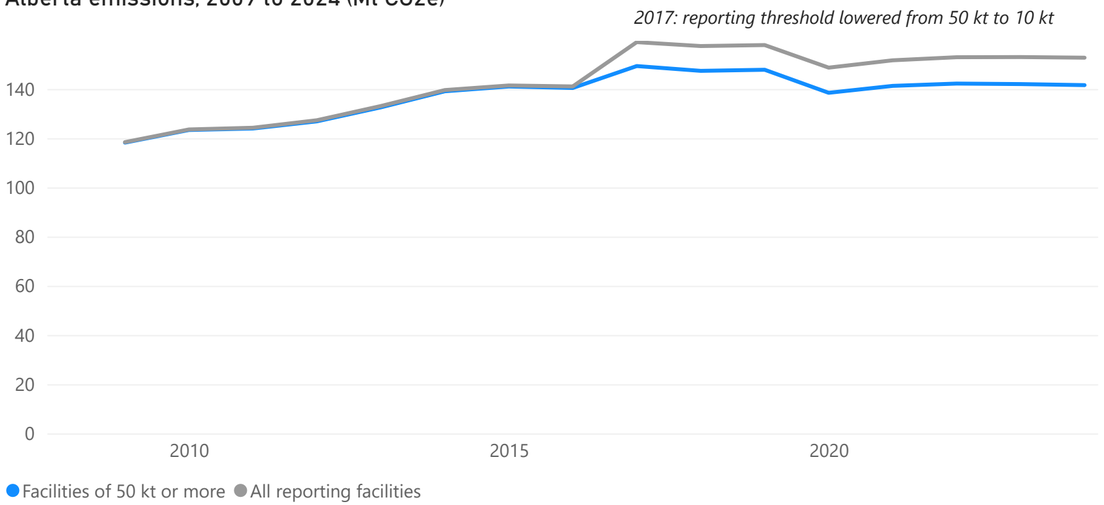

Emissions by sector, 2024 (Mt CO2e)

Source: Environment and Climate Change Canada, Greenhouse Gas Reporting Program (2024 data). Covers facilities reporting 10 kt CO2e or more, about 44% of Canada’s total emissions.

Alberta: oil and gas up, coal power down

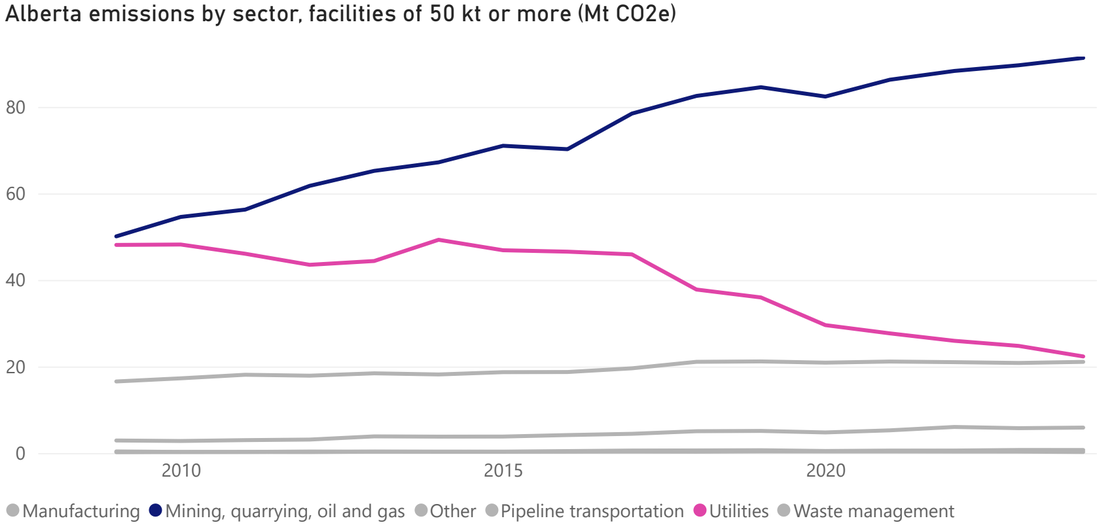

Alberta emissions, 2009 to 2024 (Mt CO2e)

Former coal plants: emissions in 2017 and 2024 (Mt CO2e)

Plant	Mt 2017	Mt 2024	Change %
Battle River Generating Station	2.05	0.63	-69%
Genesee Thermal Generating Station	9.71	4.73	-51%
Keephills Thermal Electric Power Generating Plant	8.30	2.72	-67%
Sheerness Generating Station	5.66	1.11	-80%
Sundance Thermal Electric Power Generating Plant	12.72	0.93	-93%
Total	**38.44**	**10.11**	**-74%**

Alberta emissions by sector, facilities of 50 kt or more (Mt CO2e)

Key Findings

- Oil, gas and mining emissions nearly doubled, from 50.1 to 91.3 Mt (2009 to 2024).
- Electricity emissions fell by more than half, from 48.1 to 22.3 Mt, as coal plants closed or switched to natural gas.
- Five former coal plants cut 28.3 Mt between 2017 and 2024.
- About half of the 2017 jump in reported emissions came from a reporting change, not new emissions.
- Facilities of 50 kt or more grew from 118.2 Mt in 2009 to 141.6 Mt in 2024 (+20%).

Source: ECCC Greenhouse Gas Reporting Program. Trends use facilities emitting 50 kt CO2e or more, which reported under the same rules from 2009 to 2024. Plant fuel changes confirmed from TransAlta, Heartland Generation and Capital Power announcements.
